Accessory code

X899: Electrostatic discharge protection device for class II luminaires

Technical description

The electrostatic discharge protector is a device that increases protection levels on class II appliances and is useful in situations where luminaires are installed on insulator materials like fibreglass or concrete poles.

Installation

It should be installed inside the luminaire as indicated in the specific instructions sheet.
Installation in class I luminaires or in any luminaires not indicated in the instruction sheet is not permitted.

Colour

Indeterminate (00)

Wiring

A fastening screw and washer are included with the device.

Notes

The device should only be installed by qualified personnel and in compliance with local electrical equipment regulations.

Complies with EN60598-1 and pertinent regulations
