Last information update: September 2024

---

### Accessory code

X899: Electrostatic discharge protection device for class II luminaires

---

### Technical description

The electrostatic discharge protector is a device that increases protection levels on class II appliances and is useful in situations where luminaires are installed on insulator materials like fibreglass or concrete poles.

---

### Installation

It should be installed inside the luminaire as indicated in the specific instructions sheet.  
Installation in class I luminaires or in any luminaires not indicated in the instruction sheet is not permitted.

---

### Colour

Indeterminate (00)

---

### Wiring

A fastening screw and washer are included with the device.

---

### Notes

The device should only be installed by qualified personnel and in compliance with local electrical equipment regulations.

---

Complies with EN60598-1 and pertinent regulations
