Twilight

Twilight is a compact LED solution designed to replace existing systems with conventional sources of light. The two symmetrical and elliptical optics ideal for illumination in parks, squares, pedestrian and residential areas are now joined by Opti Smart optics for street lighting even for intense vehicle traffic in urban and suburban contexts on poles or panels. The Joburg, Bilbao and Canberra versions are joined by

Odense, with a new spherical top plate that completely limits upwards emission of light and can withstand weights of snow of over 240 Kg/sq.m. DALI electronics provides management of various functions through to complete integration with smart-lighting systems.
