Accessory code

MWG0: Sequencer for RGB strip

Technical description

12V dc PWM sequencer (dimmmable 1-10V) - without radio control; allows a limited set of sequences and colour cycles by suitable connection to a push-button control panel (consult the manual included in the pack). Use of the sequencer allows a maximum of 2 consecutive strips (10 m); for longer lengths, use MWF9 as the master; with this solution 2 strips can be added one after another for each MWG0 slave used; therefore it is important to carefully calculate the total load of the strips used so as to select a suitable ballast.

Installation

connect up using the connectors included in the pack; ballast protection rating: IP20

Colour

Indeterminate (00)

Weight (Kg)

0.09

Complies with EN60598-1 and pertinent regulations

EAC
